

# Your Vision **Our Capability**

## Smoke Ventilation Systems

## BOVEMA

### **Tremorfa and Bovema (UK) Ltd have agreed to combine their expertise to offer businesses a fully integrated Smoke Ventilation installation and maintenance package**

Bovema (UK) Ltd is a part of the international Bovema Group situated in Holland. With over 25 years of experience, Bovema offers a full design, manufacture and installation service for Smoke Ventilation Systems, Natural Ventilation Systems, powered ventilation systems and bespoke Specialist Applications such as odour control maintenance.

Tremorfa is an independent installation and maintenance contractor with offices strategically positioned throughout the UK. Established in 1984 Tremorfa has a formidable list of accreditations and is firmly committed to providing excellent standards of installation and service.

#### **Design & Manufacture**

Bovema has experience working in many different applications, such as Shopping Centres, Distribution and Warehousing, Office Blocks, Cinemas and Theatres, Apartment Blocks, Underground Car Parks and Universities. Working with Architects, Consulting Engineers, Mechanical Contractors, Main Building Contractors, Quantity Surveyors and End Clients Bovema has a full understanding of each of the market sectors our clients operate in.

Recent installations include Jaguar Cars Factory, Future Inn Hotel Bristol, Quaker Oats Factory, GAP Distribution Warehouse, Floral Pavilion Theatre, Middleton Leisure Centre, HMP Kingston, Madaley Academy to name but a few.

All Bovema products are tested to the latest EN12101 Standards with all new systems being designed in accordance with BS9999: 2008. As an ISO 9001: 2000 quality assured company Bovema are committed to ensuring that the highest standards within the industry are maintained.

At a time where the key words in building design are sustainability, environmental protection and risk reduction, smoke management in critical incidents is pivotal in ensuring buildings and business survive and recover in the shortest possible time.

## Installation

Tremorfa's directly employed workforce work in partnership with Bovema (UK) Ltd to provide the highest standard of installation. The installation department has evolved with the Company and is focused in its commitment to completing projects on schedule, within budget and with zero defects in the safest manner possible. Our commitment to training apprentices is beneficial to both ourselves and our Clients, ensuring all installations are undertaken to the highest standard and ensuring a continual flow of talent to guarantee a bright future for Tremorfa and its Clients.

All Tremorfa staff undergo regular training to remain up to date with changes in current regulations and management techniques - our organisation and operations are independently certified to BS EN ISO 9001:2000 in addition to: NICEIC, ECA, NSI NACOSS Gold, FIA, HVCA, SAFEcontractor, Constructionline, C.H.A.S., J.I.B.

## Maintenance

Tremorfa's maintenance team compliments the aforementioned services by directly maintaining mechanical & electrical smoke vent systems via a UK network of service centres. Tremorfa can develop bespoke contracts which are designed to meet our present and potential client's requirements along with operational needs and statutory compliance; Tremorfa operates electronic asset based management systems for all our PPM contracts irrespective of size and assets.

Tremorfa will provide a dedicated Contract Manager and a team of skilled engineers who will ensure maintenance work is delivered to the highest possible standards of workmanship, Health & Safety and reported upon quickly & efficiently. Regular review meetings ensure that performance levels are maintained and that best practice initiatives are introduced at the earliest opportunity.

Whether it is a reactive, planned or scheduled maintenance provision; Tremorfa has the proven method and experience to deliver a successful service. We succeed at providing operational, dilapidation and plant replacement reports and assessments on critical plant and equipment therefore adding value to our client's maintenance expenditure by reducing and forecasting forward and operational needs.
